First: agree on the MVP cut line

These must work live:

1. Home page
2. Explore All Athletes page with filters and sort
3. Get Matched sponsor questionnaire and results
4. Athlete profile page
5. “Give $10 Demo” supporter flow
6. Live campaign total update
7. Admin dashboard update
8. QR mobile page
9. One campaign: Confidence Starts Here
10. One real athlete-story video
11. Printed QR stand and trading cards

These are stretch features only:

- Full Story Seed AI generation
- Partner Finder AI outreach
- Celebration video request flow
- Chalk Notes
- 3D Ripple Wall
- Multiple campaigns
- Full analytics dashboard

Day 0: everyone agrees on the data and naming

Do this together before building anything.

- Final platform name: choose **Rock the Routine**. Do not use both publicly.
- Use fictional athletes unless you receive written permission for real athlete images/names.
- Use one fictional sponsor and one real or fictional community partner.
- Decide the four sample athletes:
    - Avery Davis: Fan Favorite, youth confidence
    - Mia Torres: Rising Routine, inclusion
    - Sofia Patel: Rising Routine, education/STEM
    - Jordan Lee: Fan Favorite, wellness/family
- Decide the exact campaign: Confidence Starts Here.
- Decide the fictional supporter flow: “Give $10 Demo,” clearly labeled as not a real payment.

Prachi: backend and data owner

Prachiowns everything that makes the demo feel live.

1. Create Supabase project and database

Prachishould create these tables:

- `athletes`
- `campaigns`
- `donations`
- `supporter_tiers`
- `tasks`
- `sponsor_matches`
- `fan_actions`
- `sponsor_prospects`

Minimum athlete fields:

- id
- name
- photo_url
- specialty
- short_bio
- quote
- causes
- campaign_types
- audience_tags
- availability
- budget_min
- total_reach
- engagement_rate
- featured_type: Fan Favorite or Rising Routine
- story_video_url
- impact_goal
- current_raised

2. Seed all demo data

Create the four fictional athletes, one campaign, supporter tiers, tasks, and sample metrics.

For Confidence Starts Here, seed:

- Campaign goal: $15,000

- Raised so far: $8,240
- Community supporters: 186
- Business sponsor funding: $6,500
- Fan contributions: $1,740

3. Build the matching logic

Create the sponsor questionnaire endpoint.

Inputs:

- Business goal
- Audience
- Cause
- Campaign format
- Budget
- Athlete type: one athlete, group, or team-wide

Use the weighted score:

- Cause alignment: 35%
- Audience fit: 25%
- Campaign format fit: 20%
- Budget fit: 10%
- Availability: 10%

Return the top three athletes with:

- Match score
- Individual score breakdown
- Short explanation
- Recommended campaign

The explanation can begin as a template. If there is time, add an LLM to rewrite it naturally.

4. Build the live Give $10 Demo endpoint

This is one of the most important features.

When the judge scans the QR code and taps Give $10 Demo:

- Add a mock donation record to Supabase.
- Update the athlete's campaign total.
- Update total supporter count.
- Update fan contribution total.
- Send a realtime event.

The frontend screen and admin dashboard should update without refreshing.

5. Set up realtime subscriptions

Use Supabase Realtime so the following update live:

- Campaign total
- Number of supporters
- Latest donation
- Admin activity feed

6. Build APIs or data helpers for frontend

Give Prachi simple functions or endpoints for:

- Get all athletes
- Filter athletes
- Get athlete by ID
- Submit sponsor matcher form
- Get top matches
- Create demo donation
- Get campaign results
- Get admin activity feed
- Get tasks

7. Partner Finder, only if core is finished

Make this a simple admin page or backend endpoint.

Input:

- Business name
- Category
- Description
- Location
- Known connection
- Estimated budget

Output:

- Recommended athlete
- Recommended campaign
- Why the business fits
- Draft outreach email
- Draft LinkedIn message

Do not build automatic email sending.

Diya: frontend and product owner

You own the full user experience, responsive design, integration with Prachi's data, deployment, and live demo flow.

1. Create the app shell

Build:

- Next.js app
- Tailwind styling
- Global color system
- Navigation
- Desktop and mobile layouts
- Vercel deployment

Main navigation:

- Home
- Get Matched
- Explore Athletes
- Impact Routines
- Support
- Admin Demo

2. Build the home page

Include:

- Hero athlete visual from Raghav
- Main line: "Find the story your brand can stand behind."
- Four entry buttons:
    - I am a fan
    - I want to support athletes
    - I am a business
    - I am an athlete
- Featured Confidence Starts Here campaign
- Fan Favorites and Rising Routines preview

3. Build Explore All Athletes

This is the big athlete-card page.

Build:

- Search
- Filter panel
- Sort menu
- Athlete-card grid
- Fan Favorites section
- Rising Routines section

Filters:

- Cause
- Audience
- Campaign type
- Budget
- Availability
- Social platform
- Engagement level
- In-person appearance
- Fan Favorite or Rising Routine

Each athlete card needs:

- Large headshot
- Name
- Specialty
- Cause
- Reach
- Engagement rate
- Availability
- View Story button
- Sponsor This Routine button
- Support This Athlete button

4. Build Get Matched

Build the business questionnaire in a clean step-by-step format.

After submission, show:

- Top three athlete match cards
- Match percentages
- Why each athlete matches
- Score breakdown
- Compare button

- Build Campaign button
- Recommended Impact Routine

5. Build athlete profile page

Build one reusable athlete page that pulls data from Supabase.

Required sections:

- Hero image and athlete quote
- Story video
- Causes
- Social metrics
- Audience information
- Campaign packages
- Availability
- Sponsor fit
- Support this athlete button
- Book a celebration video button
- Your Impact section

Your Impact section should show:

- Campaign goal
- Raised so far
- Number of supporters
- Business funding
- Fan contributions
- What the money supports

6. Build Give $10 Demo flow

This is the main supporter experience.

Flow:

1. User clicks Support This Athlete.
2. User sees $10, $25, $100, and custom support options.
3. User clicks Give $10 Demo.
4. Show a loading state.
5. Call Prachi's donation endpoint.
6. Show thank-you screen.
7. Show athlete thank-you video preview.
8. Show a digital "I Rocked the Routine" card.
9. Show updated campaign total.

Clearly label it:

> Demo contribution. No payment will be processed.

7. Build mobile QR page

The QR code should open directly to the athlete or campaign support screen.

It needs to work perfectly on a phone.

The judge flow should take fewer than 20 seconds:

- Scan QR code
- See athlete
- Tap Give $10 Demo
- See thank-you screen
- Look up at presentation screen and see total update

8. Build admin dashboard UI

Prachi supplies live data. You build the screen.

Admin dashboard sections:

- Total campaign funding
- Total supporters
- Latest contributions
- Campaign progress
- Tasks
- Recent fan actions
- Sponsor pipeline preview

Make the latest activity feed obvious:

> Demo Judge backed Avery Davis with $10.

9. Build the final demo mode

Create an easy demo route with everything ready:

- `/demo`
- `/demo/athlete/avery`
- `/demo/admin`

Have buttons and tabs preloaded so there is no searching during the pitch.

10. Deploy and test

You own:

- Vercel deployment
- Mobile testing
- Laptop testing
- QR test
- Shared live update test
- Backup screen recording
- Demo reset button, if possible

Raghav: Adobe creative assets and physical experience owner

Raghav owns everything that makes the product feel emotionally real and visually polished.

1. Create the brand system

Deliver first:

- Final logo
- Color palette
- Font choices
- Icon style
- Button style
- Photo treatment
- Texture assets
- Brand guide

Use:

- Illustrator for logo and icons
- Adobe Fonts for typography
- Photoshop and Lightroom for image treatment
- Adobe Capture for Utah rock, chalk, arena, and leotard textures

2. Create athlete visual assets

Create for all four fictional athletes:

- Large profile headshot
- Athlete-card crop
- Mobile crop

- Optional action shot
- Cause badge
- Fan Favorite or Rising Routine label

Do not use real gymnasts or official Red Rocks/Utah logos without permission.

3. Create the athlete story video

This is the most important creative asset.

Create one 45-second video for Avery and Confidence Starts Here.

Story structure:

- Avery in the gym or a stylized fictional athlete visual
- Her confidence quote
- Why youth mentorship matters
- Girls on the Run or youth-confidence visual
- Sponsor/fan participation invitation
- End card with QR campaign call-to-action

Use:

- Premiere Pro
- After Effects
- Adobe Podcast Enhance
- Audition
- Firefly only for abstract backgrounds or motion textures

Deliver versions for:

- Desktop profile page
- Mobile QR page
- Pitch presentation
- 15-second social teaser

4. Create campaign assets

For Confidence Starts Here:

- Social post 1
- Social post 2
- Instagram Story
- Reel cover
- Meet-night QR poster
- Sponsor offer card

- Thank-you card
- Campaign impact-report cover
- “I Rocked the Routine” digital card

Use Adobe Express so you can visibly explain that Adobe supports rapid campaign production.

5. Create physical demo materials

These need to be print-ready.

QR code table tent

Text:

> Scan to back a gymnast
> Try the $10 supporter experience

Include QR code provided by Prachi after deployment.

Athlete trading cards

Create one card per sample athlete.

Each card includes:

- Photo
- Name
- Specialty
- Short personal story
- Causes
- Audience/engagement highlight
- QR code to profile
- Fan Favorite or Rising Routine label

Impact receipt

Create a small receipt-style printout:

> You backed Avery: $10
> Your support helps fund athlete-led community activity, youth confidence programming, and approved NIL opportunities.

Three-year path poster

Show:

> $200K → $646K → $1.24M → $2M

Under it:

> Rock the Routine adds sponsor campaigns, supporter subscriptions, athlete experiences, and measurable renewal opportunities.

Stickers or wristbands

Use only one final product name.

Options:

- I Back the Routine
- I Back the Full Roster

6. Create pitch visuals

Create:

- Opening title slide visual
- Animated campaign impact metrics
- Closing slide visual
- Sponsor proposal PDF
- Impact report PDF
- Optional 3D Ripple Wall visual

The 3D Ripple Wall is optional. Do not start it until the athlete video, QR materials, cards, and poster are finished.

Dependencies and handoffs

Deliverable	Owner	Needed by
Brand kit, logo, colors, fonts	Raghav	Before DIya finalizes UI
Database schema and seeded data	Prachi	Before Diya connects live data
Four athlete records	Prachi	Before athlete pages are built
Athlete images	Raghav	Before final frontend polish
Athlete story video	Raghav	Before profile/demo rehearsal

Sponsor matcher API	Prachi	Before Get Matched integration
Donation realtime API	Prachi	Before QR demo test
Deployed Vercel link	Diya	Before Raghav generates QR code
QR code	Diya	Before Raghav prints materials
Admin dashboard UI	Diya	Before live integration test
Final print materials	Raghav	Before presentation day

Five-day build order

November 1: foundation

Diya:

- Create Next.js app and page skeletons.
- Build navigation, homepage structure, athlete-card component.

Prachi:

- Set up Supabase.
- Create schema.
- Seed athletes, campaign, supporter tiers, tasks, and demo metrics.

Raghav:

- Deliver logo, colors, fonts, textures, and athlete-image direction.
- Start athlete images and story video.

November 2: athlete and matching flow

Diya:

- Build Explore All Athletes.
- Build filters and athlete profile layout.
- Build Get Matched questionnaire.

Prachi:

- Build athlete queries and filtering.
- Build match scoring and match-result endpoint.

Raghav:

- Deliver athlete cards and profile imagery.
- Continue athlete story video.
- Start campaign social assets.

November 3: supporter and admin flow

Diya:

- Build Give $10 Demo flow.
- Build thank-you screen.
- Build Your Impact section.
- Build admin dashboard UI.

Prachi:

- Build mock donation endpoint.
- Add Supabase Realtime updates.
- Build campaign progress and activity-feed queries.

Raghav:

- Deliver story video and social kit.
- Begin QR table tent, trading cards, receipt, and poster.

November 4: integrate and rehearse

Doya:

- Connect all frontend pages to Supabase.
- Deploy to Vercel.
- Create QR route.
- Test on phone.

Prachi:

- Verify realtime donation updates.
- Add demo reset function.
- Seed final demo metrics.

Raghav:

- Generate QR code after receiving deployed URL.
- Finish and print physical materials.
- Create pitch visuals.

November 5: polish and backup

All three:

- Run full demo five times.
- Test QR code from a phone.
- Test live Give $10 update.
- Test admin dashboard update.
- Test the athlete video.
- Record a 90-second backup demo video.
- Print extra trading cards, receipts, and QR stands.
- Prepare one laptop as the presenter laptop and one phone as backup.

What to cut first if time gets tight

Cut these first:

- 3D Ripple Wall
- Chalk Notes
- Multiple campaigns
- Full Partner Finder
- Full celebration-video workflow
- Advanced analytics
- Availability calendar

Never cut:

- Athlete discovery
- Get Matched
- Athlete profile
- Give $10 Demo
- Realtime admin update
- QR mobile experience
- Athlete story video
- Printed QR stand and trading cards
